

Apparatus To Hold And Stabilize Fast Food Containers In A Cylindrical Automobile Cup Holder

Abstract

An adapter that holds and stabilizes a fast food container in a standard cylindrical automobile cup holder to prevent spilling of its contents. A typical fast food container would be one that holds French fried potatoes. It has a lower rigid cylindrical member and two flexible upper members that are mechanically biased to return to their original position when they are not holding the container. The lower member fits into the automobile cup holder, and the flexible members hold a larger sized container temporarily in a fixed position. The adapter permits the larger sized container to be conveniently inserted and removed.
